EDUCATION

University of Florida, B.S. in Computer Science, GPA: 3.6 / 4.0

August 2022 – May 2026

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Operating Systems, Computer Organization, Information & Database Systems, UX Design, Algorithm Abstraction, Programming Language Concepts

DoD Security Clearance: Secret (2025 – Present)

SKILLS

Programming Languages: C++, Python, JavaScript, HTML/CSS, Java, SQL, MATLAB

Frameworks & Tools: Git, Linux, React.js, AWS, MongoDB, Selenium, Spring Boot, Flask, Postman, Figma, TailwindCSS

EXPERIENCE

Lockheed Martin, Rotary & Mission Systems

Orlando, FL

Software Engineering Intern

May – August 2025

- Contributed to a USMC training tool that enables simulation interoperability during exercises involving air and ground sims
- Designed 5 new interfaces for a more intuitive UI/UX with **React.js** and **HTML/CSS** in a **Linux** environment
- Validated application functionality by creating 20 automated unit tests using **Robot Framework** for **CI/CD pipelines**
- Attended SLTE to support clients onsite, gather USMC standards data, and introduce a new C2 feature to ONR clients

Software Engineering Intern

May – August 2024

- Worked with R&D group to improve UI/UX of an existing DoD-facing unit visualization web app used in naval training
- Collaborated with ONR representative, implementing 3 DoD-requested UI features in **JavaScript** and **HTML/CSS**
- Created a customizable radio emission heatmap via image processing methods, increasing rendering speed by 50%
- Improved a 30+ button toolbar with **Bootstrap**, adding a collapsible modal organization feature to minimize screen clutter
- Worked in an **Agile** environment with 20+ engineers to fulfill client requests on-time, managing project with **GitLab**

PROJECTS

BeachLens

July 2025 – Present

- Spearheaded development of a beach-finding website that provides real-time weather, tide, parking, and algae data
- Utilized Mapbox to display beach points and rip tide heatmap, and **React.js** with **TypeScript** for interactive components
- Implemented a **Python/Flask API** that fetches beach data and stores it in a **PostgreSQL Supabase** database every hour
- Deployed site with **Vercel**, managing project with **GitHub** to fulfill user requests, maintain site, and continue development

PowerPace

July– August 2025

- Developed a full-stack site for hybrid athletes to monitor their strength and cardio activities using data from the **Strava API**
- Created an interactive GUI with **React.js** and **TailwindCSS** to display activity data and provide insights with **Chart.js**
- Implemented a **Java Spring Boot** backend to make API calls and store data in **MongoDB** database for quick retrieval

TEMPER

May – August 2025

- Led a team of 5 developers in creating a **REST API** and GUI for a risk-management temperature monitoring system
- Created 5 **Python/Flask** endpoints to interface with **PostgreSQL** database, retrieve sensor readings, & create custom alerts
- Developed a **React.js** dashboard to show real-time sensor readings, history visualizations, and let users create/receive alerts

GatorGoalMate

January – May 2024

- Collaborated with 3 software engineers to develop a full-stack goal-setting social media platform that allows for content creation, social interaction, profile customization, and account authentication with a **React.js** frontend and **Node.js** backend
- Implemented a **MongoDB** database to store 10+ user data points which are accessed by a REST API made with **Express.js**
- Participated in 7 Agile sprints during the timeline, utilizing **GitHub** for version control and issue tracking

LEADERSHIP

Society of Women Engineers

Intramural Sports Chair & Fundraising Chair

May 2023 – May 2025

- Organized and lead SWE's intramural sports teams and fitness-related events, increasing participation by 50%
- Coordinated our chapters participation in S2S fundraising goals, resulting in an award of \$1000
